This Presentation is brought to you for free and open access by the Assessment at ScholarWorks at WMU. It has been accepted for inclusion in Assessment Fellows Grant by an authorized administrator of ScholarWorks at WMU. For more information, please contact maira.bundza@wmich.edu.
Gender Differences in the Aviation Flight Science Program: A Study of Performance

Lisa Whittaker
College of Aviation
February 23, 2006
University Support

- **Monthly meetings**
  - August 2005 through May 2006
  - Dr. Evans, Vice Provost for Institutional Effectiveness, along with the other grant fellows met each month.
  - Outcomes: Guidance and lessons learned. Teamwork!

- **Assessment Institute in Indianapolis, IUPUI**
  - October, 2005

- **HSIRB (Human Subjects Institutional Review Board)**
  - Victoria Jansen – HSIRB approval

- **Registrar’s Office**
  - FERPA Family Educational Rights and Privacy Act

- **Office of Institutional Equity**
  - Jim Gilchrist – data design and de-identification
  - Tracy Pottak – data collection and organization

- **Office of Information Technology**
  - Julie Scott – SPSS software and data analysis
Since student records included confidential data, HSIRB approval was required.

First step – CITI course
  - Required

Second step – review of research proposal
  - Revisions required
  - Most important issue – de-identifying students
    - Accomplished with help of Jim Gilchrist

Approval received on October 7, 2005.
FERPA Approval

- Family Educational Rights and Privacy Act
  - Protects privacy of student educational records.
- Contacted Registrar’s office
- Directed to “Informational Guidelines for Western Michigan University Faculty and Staff”.
- No objections since data is de-identified.
Purpose of Study

- Aviation is a good career field.
  - Challenging, lucrative, vital to the U.S. economy.
- However, women are underrepresented in the field of aviation.
- Research is needed to help explain reasons.

Pressure exists within academia, industry and our government to increase the number of women into workforce, especially in Science, Technology, Engineering, and Math (STEM).

Aviation is a subgroup of STEM
- technology

A literature review of gender differences in STEM revealed many factors.
- (See handout for details)
- Few studies have been published on gender differences in aviation.
- Understanding the all of the factors is important in affecting change.
Factors

- Gender preferences
  - career choice
- Stereotyping
  - male / female characteristics
- Career field identity
  - Masculine / feminine
- Anxiety
  - Math / performance
- Environment
  - Classroom
  - Work
  - Social
- Preparation
  - Early choices impact interests
- Teaching / learning methods
  - styles
- Population
  - One of the few
  - Population affects population
- Cognitive ability
  - Studies are inconsistent / contradictory
  - Women do excel in STEM
- Performance*
  - Integral with self confidence
  - Integral with other factors
Why Study Performance?

- Performance is measurable and is therefore suitable for a quantitative study.
- Performance is integral with many of the other factors.
  - Preparation
  - Anxiety
  - Stereotyping
  - Teaching / learning methods
  - Population
    - In order to increase population, we must understand performance issues.
- Performance is one of the criteria for admission.
- Insight into performance is one step in addressing the issue of population.
Hypothesis

- The academic performance of female students, based on ACT scores and average GPAs, at the College of Aviation, will be equal to or greater than the performance of male students.
Research Method

- Performance data was collected
  - Aviation Flight Science majors (only)
    - End of Spring 2003 semester
  - Data logged in Excel spread sheet
    - Hours and hours spent manipulating the data

- Recommendation from Assessment Grant Fellows:
  - Use Statistical Program for Social Sciences (SPSS) rather than Excel.
Data Analysis

- **SPSS software was obtained from OIT**
  - **ANOVA - Analysis Of Variance**
    - Tests the hypothesis that the group means of the dependent variables are equal.
  - **Dependent variables**
    - Aggregate GPA
    - Composite ACT scores
  - **Independent variables**
    - Gender
      - Attribute: male or female
    - Class standing
      - Attribute: Freshmen / Sophomores or Junior / Seniors
## Descriptive Statistics

Results

- **Composite ACT scores**
  - There is no significant difference in
    - between male and female students
    - between classes (freshman/sophomore and Junior/Senior)
    - Between gender / class status

- **Cumulative GPAs**
  - There is no significant difference in
    - Between male and female students
  - There is a significant difference
    - Between freshmen/sophomores and junior / seniors, but gender was not a factor.
      - Junior / seniors had higher GPAs.
Opportunities

- Process was a completely new experience.
  - Gained familiarization with experts and services available throughout the university.
- Calculating the budget without prior knowledge of time involved for each step.
  - Resulted in over estimating funds required.
    - University support / assistance greatly reduced time required
- Conducting statistical analysis.
  - Need to develop this skill area in order to continue independent research.
  - Fortunately, there were SMEs willing to help.
Goals and Objectives

Goal:
- The goal of the study was accomplished.
- The academic performance of female students, based on ACT scores and average GPAs, at the College of Aviation is equal to the performance of male students.

Objectives:
The result of this study is an important step toward dispelling the myth that women cannot compete with their male counterparts.
- Therefore, we need to continue to research gender issues and increase awareness of issues and opportunities in STEM among
  - Administrators
  - Faculty
  - Students of all ages
    - Discuss recruitment, retention and classroom environment and teaching / learning styles.
- Put best practices to use.
Future Research Projects

- This assessment study was very narrow. In order to validate the study, the scope needs to be expanded.
  - Conduct a longitudinal study
    - To determine trends in performance and retention.
  - Increase the population (students)
    - Collaborate with other aviation programs
  - Conduct qualitative studies to address other factors.
Acknowledgement

- With the help of the university support system, every challenge was met with great cooperation, patience and efficiency, resulting in minimum frustration for me.
