# MIS-C Data and Reporting

## What is MIS-C?

Multisystem Inflammatory Syndrome in Children (MIS-C) is a condition in children and adolescents under 21 years of age where multiple organ systems become inflamed or dysfunctional which occurs in association with illness. Children with MIS-C may have a fever and various symptoms, including abdominal (gut) pain, vomiting, diarrhea, neck pain, rash, bloodshot eyes, or feeling extra tired. We do not yet know what causes MIS-C. However, many children with MIS-C were infected with the virus that causes COVID-19, or had been around someone with COVID-19.

Health care providers and local health departments are asked to maintain a high degree of suspicion for MIS-C in pediatric and adolescent patients presenting with symptoms similar to Kawasaki Disease or ill individuals who have been previously exposed to COVID-19 with signs and symptoms. Patients have presented with persistent fever\*, hypotension, multiorgan (cardiac, gastrointestinal, renal, hematologic, dermatologic, and neurologic) involvement, and elevated inflammatory markers. Respiratory symptoms have been present in some, but are not a common finding.

\*Persistent fever is a measured fever of 100.4°F (38.0°C) or greater for at least 24 hours, or report of subjective fever lasting at least 24 hours.

## Reported Cases of Multisystem Inflammatory Syndrome in Children (MIS-C)

Data will be updated on the first and third Thursdays of the month.

**Multisystem Inflammatory Syndrome in Children (MIS-C) Michigan Data Summary 8/12/2021**

<b># Cases Confirmed and Reported to CDC*</b>	<b>161</b>
MIS-C associated Deaths	5 or fewer
Cases admitted to ICU	114 (70.8%)
Onset Date Range	4/14/20 to 7/2/2021
Age Range	0-20 years

\*Meets CDC Case definition

<https://emergency.cdc.gov/han/2020/han00432.asp>

### DEMOGRAPHIC INFORMATION (N=161)

Age Group	Count	%	Race	Count	%
0-4 yrs	43	26.7%	Black/African American	70	43.5%
5-10 yrs	65	40.4%	Caucasian	66	41.0%
>10 yrs	53	32.9%	All Others / Unknown	25	15.5%
Gender	Counts	%	Ethnicity	Count	%
Male	92	57.1%	Not Hispanic or Latino	115	71.4%
Female	69	42.9%	Hispanic or Latino	12	7.5%
Unknown	0	0.0%	Unknown	34	21.1%

**Confirmed Cases of MIS-C by Week of Onset in Michigan from April, 2020 through August 12, 2021**

\*The shaded red area represents the most recent eight weeks of data, in which reporting of cases is still incomplete. The actual number of MIS-C cases during this period is likely larger and these numbers will increase as additional case reports are incorporated.

*Red shading indicates the expected reporting lag for new cases. Cases with onset dates in this time period may not have been detected or reported yet.*
