# MIS-C Data and Reporting

## What is MIS-C?

Multisystem Inflammatory Syndrome in Children (MIS-C) is a condition in children and adolescents under 21 years of age where multiple organ systems become inflamed or dysfunctional which occurs in association with illness. Children with MIS-C may have a fever and various symptoms, including abdominal (gut) pain, vomiting, diarrhea, neck pain, rash, bloodshot eyes, or feeling extra tired. We do not yet know what causes MIS-C. However, many children with MIS-C were infected with the virus that causes COVID-19, or had been around someone with COVID-19.

Health care providers and local health departments are asked to maintain a high degree of suspicion for MIS-C in pediatric and adolescent patients presenting with symptoms similar to Kawasaki Disease or ill individuals who have been previously exposed to COVID-19 with signs and symptoms. Patients have presented with persistent fever\*, hypotension, multiorgan (cardiac, gastrointestinal, renal, hematologic, dermatologic, and neurologic) involvement, and elevated inflammatory markers. Respiratory symptoms have been present in some, but are not a common finding.

\*Persistent fever is a measured fever of 100.4°F (38.0°C) or greater for at least 24 hours, or report of subjective fever lasting at least 24 hours.

## Reported Cases of Multisystem Inflammatory Syndrome in Children (MIS-C)

Data will be updated on the first and third Thursdays of the month.

Multisystem Inflammatory Syndrome in Children (MIS-C) Michigan Data Summary 9/9/2021

# Cases Confirmed and Reported to CDC*	163
MIS-C associated Deaths	5 or fewer
Cases admitted to ICU	116 (69.9%)
Onset Date Range	4/14/20 to 8/26/2021
Age Range	0-20 years

\*Meets CDC Case definition

DEMOGRAPHIC INFORMATION (N=166)

Age Group	Count	%	Race	Count	%
0-4 yrs	44	26.5%	Black/African American	72	43.4%
5-10 yrs	68	41.0%	Caucasian	69	41.6%
>10 yrs	54	32.5%	All Others / Unknown	25	15.0%
Gender	Counts	%	Ethnicity	Count	%
Male	96	57.8%	Not Hispanic or Latino	118	71.1%
Female	70	42.2%	Hispanic or Latino	13	7.8%
Unknown	0	0.0%	Unknown	35	21.1%

Confirmed Cases of MIS-C by Week of Onset in Michigan from April, 2020 through September 9, 2021

\*The shaded red area represents the most recent eight weeks of data, in which reporting of cases is still incomplete. The actual number of MIS-C cases during this period is likely larger and these numbers will increase as additional case reports are incorporated.

*Red shading indicates the expected reporting lag for new cases. Cases with onset dates in this time period may not have been detected or reported yet.*
