WMU ScholarWorks Citation

This Poster is brought to you for free and open access by the Office of Faculty Development at ScholarWorks at WMU. It has been accepted for inclusion in Academic Leadership Academy by an authorized administrator of ScholarWorks at WMU. For more information, please contact wmu-scholarworks@wmich.edu.
The S-STEM Scholar Program at WMU

Background on Program

Begun in 2010, the S-STEM Scholar Program increases opportunities for financially needy but academically talented students. These students:

- Are first-time, first-year students
- Demonstrate financial need through FAFSA applications
- Will enter a major in the College of Engineering and Applied Sciences
- Have a math ACT of 24 or above

Student awardees receive up to $3,000 per semester, and continue to receive this amount for up to eight semesters with continued academic success and progress to degree.

Majors Eligible to Apply for an S-STEM Scholar Award:

- Aerospace Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Construction Engineering
- Electrical Engineering
- Mechanical Engineering
- Materials Engineering
- Computer Science
- Manufacturing

The S-STEM Scholar Program at WMU has been fully funded for Phase I with support from the National Science Foundation (NSF) Phase I proposal submitted in August 2014 and Phase II proposal submitted in August 2015. Funding is provided through the NSF LSAMP program (Reproducible Research Fund).- 269.276.3354

S-STEM Scholar Opportunities: Research

Current S-STEM scholars have presented several conference papers and participated in research conferences. The group below attended American Society for Engineering Education (ASEE) North Central conference at Ohio State, April 2013.

S-STEM Scholar Publications and Conference Presentations

G. Maxwell, O. Munoz, N. St. Louis, B. Allen, A. Kline, and F. Abdel-Qader "Building to Learn and Learning to Build: The Baja Experience," ASEE North Central conference, April 2013, Ohio State University, Columbus, OH

J. Vermeer, A. Kline, B. Young, and B. Allen, "Biospreading Fermentors Assembly," Extended Abstract for ASEE North Central conference, April 2013, Ohio State University, Columbus, OH

STEM Scholars Opportunities: Professional Societies

Oscar Munoz, 3rd year S-STEM Scholar, with the Society of Automotive Engineers (SAE) Baja Car following their 7th place finish in the Backwoods Baja national competition, October 2013. Oscar joined SAE as his S-STEM Scholar student professional activity.

Phase I: Results of S-STEM Scholars Program

From Fall 2010 through Fall 2013, the S-STEM Scholar Program provided scholarships to 33 CEAS students, for a total of over $300,000. Of these 33 students:

- 22 have been retained in the CEAS and in the S-STEM Program
- 2 have been retained in the CEAS but did not meet GPA requirements (2.72) to continue in S-STEM Scholars
- 2 are retained at WMU but in non-STEM majors
- 2 were no longer financially in need
- 1 transferred from WMU
- 1 left WMU for unknown reasons
- 3 have left WMU for poor academic performance

Thus, 79% of S-STEM Scholars have been retained in the College of Engineering and Applied Sciences (CEAS). In comparison, the CEAS STEP Program (supports retention of 1st- and 2nd-year students) had 62.2% retention after Year 1, and 49% retention after Year 2, for students starting in 2010.

Phase II: At-risk and Transfer Students

Research as well as faculty experience with the ongoing MI-LSAMP (Louis Stokes Alliance for Minority Participation) program has shown that students often hit a financial roadblock by their junior or senior year, causing them to work more and take fewer credit hours. This can delay time to degree, or they may not finish at all.

Phase II proposes to focus on junior- and senior-level students who have shown commitment to STEM majors and show financial need. Another main goal is to focus on diversity and less traditional students, which includes transfer students.

Partners in the Phase II proposal will include MI-LSAMP, the WMU Admissions Office, and the CEAS Advising Office. MI-LSAMP has partners with nine community colleges and will provide networking opportunities to identify and attract quality candidates.

Table 1 shows the demographic target or potential head count for Phase II of the S-STEM Scholars Program. Note the differences between admitted students and actual enrollments in CEAS for under-represented minorities (URM).

The goal of the S-STEM Scholar Program is to enhance the retention and graduation rates of academically talented but financially needy students, and to prepare them to successfully enter the engineering and applied sciences professions or to continue in graduate studies. Phase I results show increased retention of targeted students over their peers. Phase II proposes to extend program opportunities to upper-level students committed to their STEM majors and own professional success.

Summary: S-STEM Success and Future

The S-STEM Scholars Program at WMU has been fully funded for Phase I with support from the National Science Foundation (NSF) Phase I proposal submitted in August 2014 and Phase II proposal submitted in August 2015. Funding is provided through the NSF LSAMP program (Reproducible Research Fund).
