Bettina Meyer: Librarian of the Year

The Michigan Library Association honored Bettina Meyer at the 2006 annual conference in Detroit as the “Librarian of the Year.” As described in the Kalamazoo Gazette’s August 27, 2006 article, Meyer has been “involved in advancing library technology and developing resource-sharing networks among libraries” in Michigan for over two decades.

Meyer was first employed at WMU as head of the interlibrary loan office, now known as Resource Sharing. She also supervised the Southwest Michigan Educational Library Project (SWELP) that provided reference service and loans to 175 libraries in 16 counties, was Library Development Officer, and helped to organize and lead the Friends of the University Libraries at WMU.

Since 1991, Meyer has been Assistant Dean for Resources where she has been instrumental in building the print, non-print, and electronic collections in every program that the University offers. Meyer is scheduled to retire with emerita status in June 2007, after 27 years of service at WMU.

WMU’s 21st Century Libraries

By Bettina Meyer, Assistant Dean for Resources

Over the last 20 years, developing the University Libraries collections for Western Michigan University’s students and faculty has been an adventure racing into the future, embracing the past, and striving to meet the challenges brought about by technology. Collection development has gone beyond selection of a book or journal with the expectation of seeing it in the library’s stacks. Technological advances and the increasing availability of online books, journals, music, and databases have expanded the options for developing collections.

The challenges for an academic library continue to be many and are sure to become even more challenging in the future. The means to “access” print resources may remain the same (purchasing outright, subscribing, borrowing, etc.) or, as occurs more and more often, the option for online access is increasingly available. For online resources, one must be able to negotiate pricing, license agreements, or contracts with multiple publishers and vendors who exist within several competitive markets. Within such agreements are issues of identification of authorized users, number of users, technical requirements, copyright and legal use for electronic reserves, archival rights, course packs, interlibrary loan, and usage statistics. Always at the forefront is how to provide the resources needed to support WMU’s academic programs and research whether offered on campus, at extended university sites, or through distance education.

Print AND Online in Today’s Library

Traditionally published books, that is, printed “paper” copies, continue to be the main format in the University Libraries. However, for over a decade, e-books, notably NetLibrary and eBrary and, more recently, Books24x7 and Safari Tech Books Online, as well as several other sources, supplement the print collections and are used for electronic reserves and research. During the same period, the Libraries has acquired several print collections of note. Two such collections are (1) the Sternberg collection of books of art, exhibit catalogs, and auction catalogs, and (2) a large collection of books on the history of China. Both the Archives and Regional History Collections and the Special Collections and rare books department continue to acquire primary source books, manuscripts, and collections in print. These highly desirable print titles bring unique research materials to University programs and curricula.

Electronic resources have greatly improved access to library materials without a user setting foot in the University Libraries. The Libraries’ Web site is open 24/7 and provides the night owl and off campus student options not previously available. Even more important is the fact that the depth and breadth of collections have been enhanced with primary source database collections such as those offered by the Alexander Street Press’s North American Women’s Letters and Diaries, North American Immigrant Letters, Diaries and Oral Histories, and Black Thought and Culture. Music collections are now available online from the Naxos Music Library, Classical Music Online, Smithsonian Global Sound, and African American Song while the online Sanborn Maps 1867-1970 provides access to 300 Michigan towns and cities drawn at a scale of 50 feet to the inch, including street blocks and building numbers.

Ever-expanding Accessibility

Cooperative collection development in the online environment has become a way
Continued from page 1

to expand library resources beyond the library budget. Participating Michigan academic libraries cooperate in the provision of several electronic journal collections by pooling their subscriptions allowing each library access to the online holdings of the other institutions in addition to the institution’s subscribed journals. Examples of such collections include the multidisciplinary journals published by Blackwell Publishing, Elsevier Ltd., Springer Verlag, and Wiley Interscience. On a statewide basis, the Michigan eLibrary (http://www.mel.org/), developed by the Library of Michigan, provides access to multiple electronic databases to all the citizens of Michigan. On a national basis, academic libraries throughout the United States participate in a cooperative license agreement for access to the LexisNexis Academic Universe database. Cooperation in other areas of collection development has been a standard principle for many years. Western Michigan University Libraries is a member of the Center for Research Libraries, a consortium of North American universities, colleges and independent research libraries. “The Center’s mission is to support advanced research and teaching in the humanities, sciences, and social sciences by ensuring the survival and availability of the knowledge resources vital to these disciplines.” (www.cri.edu/) Consortium members annually submit and vote on proposed purchases of materials too expensive to purchase individually yet are held by fewer than five libraries. All center materials are available to members through interlibrary loan. Through its membership in the Center, the University Libraries has also participated with other members in the cooperative acquisition of Digitale Bibliothek deutscher Klassiker, an electronic edition of the Bibliothek deutscher Klassiker, which contains the highpoints of German literature.

Resource Building Principles & Practices

The University Libraries houses diverse collections of printed and electronic materials that complement the programs and research of the institution, WMU, that it serves. The Libraries also supports the acquisition of unique collections related to the programs and research needs of the southwestern Michigan community in which the University is geographically located. Thus, the Libraries serves as a depository for regional materials, and, in so doing, provides a unique archival source for materials that would otherwise be lost. For example, the manuscript records of southwestern Michigan and regional government records are held in the Archives and Regional History Collections Library located on the East Campus. As a result, this special collection provides unique access to the history of the region. The Special Collections and rare books department, Waldo Library, acquires rare and unique resources in a number of areas that are closely tied to University programs. The Cistercian and Monastic Studies Collections, the Medieval Studies Collections, the Historical Children’s Collection, and the Carol Ann Haenicke American Women's Poetry Collection are just a few of the special collections that have a strong relationship to the University and local research needs.

Digitizing and Building for the Future

The uniqueness of the University Libraries’ resources as described in its online catalogs and databases means that rare and fragile materials are more easily located. Some materials are very fragile or deteriorating and here is where collection building takes a different turn. Digitizing rare and fragile resources can preserve their content and assure future generations access. Currently, the Libraries’ Digitization Center is completing a Library of Michigan funded project to digitize eight Civil War diaries that were written in pencil and, over the years, have been fading away. While preserving the original documents, students and others will have access to the content as it was written.

Other changes in collection development are really a reflection of some 100 years of changes in technology. The results greatly improve the ability of WMU’s academic libraries to provide resources beyond what we may be able to provide on a permanent basis. The services available include the decades old interlibrary loan, which provides for the borrowing and lending of books and articles between libraries. Today’s ILL service may involve purchasing an article from a vendor or obtaining it under fair use from another library and borrowing a book for the researcher. In all cases, interlibrary loan supplements collection building by supplying data on usage and copyright compliance. Such information assists in the evaluation of a resource for purchase or subscription. Circulation data from the Libraries’ own collections are also used to evaluate and assist in collection development.

New to collection development at WMU is the implementation of the statewide union catalog, MelCat, formed under the auspices of the Library of Michigan. Participation in MelCat makes accessible all the collections of all participating Michigan libraries: the goal is to provide better service to the residents of Michigan no matter where they are in the state. The MelCat database also allows collection development librarians to assess what is already available locally and statewide and to build collections that add to resources available within the state rather than duplicating copies. Of course, no commentary on building a 21st century library is complete until one notes the thousands upon thousands of Web sites of interest that can be found when one “googles” his or her area of interest. For the collection development librarian, Web sites are part of the selection process that a librarian uses to make a critical judgment of the value of the site to support WMU’s programs and research. Digitized collections such as the WMU Civil War Diaries abound. Selecting and cataloging the best of these collections has become part of building a collection.

And...
And Gladly Collect...
By Sharon Carlson, Director, Archives and Regional History Collections

There is an interesting, even intriguing story of "why here, why now?" behind many of the collections housed in the Archives and Regional History Collections. Obviously, many of the collections contain unique materials, which, of course, entice those of us who are curators. But, on occasion, the rationale for the actual acquisition of a collection is equally interesting and that small piece of history may not be apparent to researchers. Indeed, patrons frequently ask how collections come to be placed in an archive. There is no single answer that may be given to this question, but the acquisition of almost every collection has at least one or more causative elements.

To begin this tale is to note that collections arrive due to differing circumstances. In the best case scenario, the creator of the documents makes a decision that he or she would like to donate papers to expand the University's Archives—usually because "there" they will be preserved. This may be some years after the documents were created, and typically occurs when somebody is cleaning or perhaps downsizing and decides that his or her papers may be of value to researchers. In many instances, this is the best of circumstances for acquiring papers. The archivist has the opportunity to ask questions about the papers and activities associated with them. The archivist also has an opportunity to get biographical information from the donor that helps to evaluate the potential uses of the collection and identify the researchers who would find this particular collection worth examining.

Some recent additions of this nature have included materials donated by Glen Bachelder and Lance Ferraro. Bachelder grew up in Kalamazoo and had a long and distinguished career in Lansing, working for several governors. He started organizing and donating his family and genealogical papers to the Archives in 2006. He is in the process of doing the same for his professional papers.

Lance Ferraro, our second donor example, operated a local photography studio and was very involved politically from the 1970s to the 1990s. Over a period of many years, he has donated records associated with his business as well as files from some of the committees he participated on, including the Citizens for Responsible Rail Consolidation and Urban Development. In both instances, we in the archives have enjoyed getting to know the donors and have been able to ask them questions about the papers. This is perhaps one of the most rewarding aspects of archival work.

A variation of this form of gift occurs when the creator of the papers is no longer living and a family member or, perhaps, a personal representative decides to donate the papers. This scenario almost always offers fewer opportunities to learn more about the papers. Depending on the relationship the current donor has to the creator of the papers or collection, information about the contents varies considerably. In the 1960s, Western Michigan University acquired the papers of Caroline Bartlett Crane from her granddaughter. In this instance, the family had considerable knowledge of Crane and could answer questions as the collection was processed for researchers.

Both instances of when and by whom the collection is donated may require site visits. The University Libraries van has been used in several instances to collect papers at a home or business because it is not always possible for donors to bring boxes to the Archives. Sometimes the document retrieval occurs at a stressful time for the donor, especially if a physical move or a death has brought about the decision to donate materials. However, the benefit of retrieving papers from a home or business is that it may well provide additional information about the donor or the history of a business or organization. We especially find that retrieving records from a business location provides information not available in other locations. Yet, when retrieving papers from a home family, there may be additional clues about the tastes and interests of the donor—or friends and relatives who can add an extra dimension to the documents' value.

In a few instances, the University Archives personnel have, literally, been given the key to a house or building and told how much time could be spent to gather, pack, and remove the papers. The first time this occurred, we had three days to clear all donated materials from a house. The donor of the papers was recently deceased and had not lived in the house for several years. The large two-story house in Kalamazoo's Vine neighborhood contained one hundred years of professional and personal papers of a prominent nineteenth century family. The donor left a large portion of her estate to Western Michigan University and stipulated that her family papers be donated to the Archives. The estate executor did not know much about the history of the family, but was well acquainted with the donor. The papers included considerable information about the family and additional valuable information was gathered through research.

Retrieving collections may involve several trips and provide unique opportunities to view buildings that would not be typically open to the public. Beginning in 2005, staff of the Western Michigan University Archives and Regional History Collections received a call from former employees involved in clearing out records from the building that had housed the Engineering Department of the Kalamazoo Vegetable Parchment Paper Company. The equipment had been removed and sold, and the appropriate owners had removed legal papers. What remained included photographs and drawings of equipment and buildings associated with the several paper

Continued on page 4
companies that had operated on that site as well as community buildings. The building where the papers had been kept had, unfortunately, experienced some leaks and had not been heated. As a result, our team of "removal archivists" had some physical challenges to meet!

The first phase of this particular acquisition involved relocating all the materials from their vulnerable environment in one building to a more stable building on the plant's compound. Once removed from the first location, every item or container has had to be sorted and examined to determine if the record poses a hazard such as the presence of mold. If it does have a problem, that archive must be removed and set apart or destroyed. This evaluative procedure has already taken over two years and will not be finished until summer of 2007. Besides the number of records that have had to be examined, moved, and evaluated, the project has taken extra time because all the buildings housing the records are unheated. As a result, the project has been abandoned during the coldest winter months. Despite this setback, we have had the advantage of being able to see where a key historical industry of Kalamazoo once thrived. Moreover, we have had the expertise of several retirees, Joe Chadderdon and Don Davoust, in particular, who have been able to tell us about the papermaking operations and how the records relate to the once-thriving industry activities that occurred in this now dilapidated place.

One always-intriguing aspect of being a collector of archival family and business papers is that we never know what will be encountered when sorting through a person's personal papers. One of the more interesting things that we have uncovered is human hair, usually small locks from children although, in one instance, we discovered a very thick brown braid. In this instance, photographs provided documentation that allowed us to make a good guess as to whom it belonged. Photos of the donor through her early teen years revealed that she had beautiful brown hair and often wore a single braid. Later photos from the 1920s indicate that she opted to cut her hair in a popular bob style of that era, but as often occurred, the braid was cut off as a unit and kept with other family mementos.

We have also found wigs, false teeth, and even a toilet seat tucked in with boxes and bags of papers. Obviously, in buildings that have not been occupied, there is also the risk of animals and animal waste. This archivist/archaeologist has never had the unfortunate experience of finding living mice, but I have often encountered evidence they were there before me. And, of course, there is ample evidence of a variety of bugs—both remains and, on occasion, living!

The most unusual acquisition story in which the Archives has been involved revolves around a gun. A Western Michigan University administrator had donated family and professional papers to the Archives in the years following his retirement. On occasion, he stopped into the Archives and dropped off materials, and, other times, somebody would go and retrieve papers from him. On a nice spring day in the early 1990s, he called the Archives to ask if somebody could pick up a few more papers he wanted to deposit. I had never met him and enthusiastically agreed to stop by his condominium over lunch. We visited briefly and I left with a brief case and a paper bag. The bag seemed heavy for the size and presumed number of papers in it, but I simply transported them back to the Archives where I handed the materials to Wayne Mann who was, at the time, the Director of the Archives. Mr. Mann returned about 20 minutes later and asked if I had looked at the papers or anything else in the bag. I indicated that the donor said that this material was especially for Wayne and I had not looked in the bag. Unbeknownst to me, the donor wanted to show a vintage firearm to Wayne and thought the most efficient way to deliver it would be to pack the gun in the bag with the papers! Let me hasten to affirm, the gun was NOT added to the Archives and Regional History Collections.

The next time you visit the Archives and Regional History Collections, in addition to realizing that you are working with unique and interesting materials, you may want to ask about the acquisition itself. Where did it come from and how did it get to the Archives. You may be surprised by the answer, but if you've read this far, you may also have learned that every archival collection has a story behind the acquisition that is also a part of the mystery of history!

Books are the legacies that a great genius leaves to mankind, which are delivered down from generation to generation as presents to the posterity of those who are yet unborn.

—Joseph Addison
Walbo Hosts Nobel Winners!

By Susan Steuer, Head, Special Collections

The University Libraries was fortunate to host, in late 2006, an exhibition celebrating the 100th anniversary of the award of the Nobel Peace Prize to Bertha von Suttner in 1905, and the 60th anniversary of the founding of the League of Nations in 1945. The exhibition was on display from October 18 through December 17, 2006, on the first floor of Walbo Library. The substance of the exhibit, which was designed as a tool for researchers and the general public, can be viewed on a website, http://www.indiana.edu/~nobel/index.html, with digitized original documents from the League of Nations Photo Archive and the United Nations Library in Geneva. The Walbo exhibit opened on October 18, 2006, in the Meader Rare Book Room at 3:30 p.m. with presentations from Mr. Jian Liu, Dr. Robert Goehlert and Dr. Kenneth Steuer, who described the conception, rationale and ongoing development of the project. The exhibition was accompanied by bookmarks with website information and printed bibliographies about the Nobel Peace Prize for those interested in delving further into the topic.

The exhibition highlights thirty-nine laureates—people and institutions—who have a strong link with the pre-World War I peace movement, the League of Nations, and the United Nations. The exhibit is arranged on forty-five freestanding panels, each six feet tall. Each panel celebrates a laureate and includes a photo, quotation, and short biographical sketch. Among the laureates featured are von Suttner, who, in 1905, became the first woman to receive the prize; U.S. President Woodrow Wilson, who led the United States delegation to the 1919 Versailles Peace Conference; Norwegian explorer Fridtjof Nansen, who won the peace prize in 1922 for his humanitarian work with refugees; and current U.N. Secretary-General Kofi Annan, who was awarded the Nobel Peace Prize in 2001.

The display of the laureates’ panels groups the individuals by (1) those affiliated with the early peace movements, (2) individuals connected to the League of Nations, and (3) statesmen involved in the development of the United Nations. The laureate panels in each of the three categories are placed in chronological order according to when the individual or organization was awarded the Peace Prize.

This unique exhibition grew out of an earlier collaborative project between the League of Nations Archives and Indiana University. Although the League of Nations ceased to exist in 1946, its archives and historical collections survive as invaluable resources for historical research. The Archives, created in 1957 in Geneva, include official records as well as portraits, paintings, caricatures, original artworks, and unique objects d’art. While the Archives have been maintained since 1957, funding has been marginal, and many archivists and librarians felt that the collection was underutilized and needed further promotion. In June 2000, Robert Goehlert, a librarian at Indiana University’s Wells Library, led a research team, including fellow librarians Jian Liu and Kris Bell, to the League of Nations Archives. Their goal was to establish a digital library project dedicated to digitizing one of the League of Nations Archives’ photograph collections. In the summer of 2001, Goehlert and Liu returned to Geneva to continue work on the project. This time, they were accompanied by Fenton Martin, Kenneth Steuer, and Sarah Hammill. Over a six-week period, the materials and metadata for the project were compiled. This resulted in the development of the League of Nations Photo Archive, http://www.indiana.edu/~league/intro.htm, which includes photos arranged in the following categories: Personalities, Assemblies, Councils, Delegations, Commissions, Conferences, the Secretariat, the Permanent Court of International Justice, the Bureau International du Travail, and Miscellaneous Photos. The original of the photos are held with the United Nations Office at Geneva (UNOG) Library, League of Nations Archives Sub-Unit. The photo archive website, maintained through Indiana University, also includes reference tools to help users contextualize the materials, including a bibliography of English-language works about the League, a timeline of events during the interwar period, a research guide to other primary sources about League activities and members, and links to other relevant sites.

The resulting website exceeded the expectations of the United Nations Office at Geneva, and the Geneva archivists were eager to participate in another project with the librarians at Indiana. Blanche Blukacz-Louisfort, Chief of the League of Nations Archives at that time, approached Goehlert, Steuer, and Liu with the idea of commemorating the anniversary of the Peace Prize. As a result, plans were made for another team to go to Geneva. This team included two librarians, a designer, three library school students, and a historian, Ken Steuer, who selected the materials for the exhibit and accompanying website, and provided the metadata for the project. The design and content development for the panels were completed at Indiana University during Fall 2005, after which the material was submitted to the relevant UN agencies for final approval. The final panel production took an additional six weeks. The exhibition was displayed at Wells Library at Indiana University and the Indiana State Library prior to being installed at Western Michigan University in late 2006. A duplicate set of panels was prepared in Geneva and displayed at the United Nations Library there, also in 2006. The next significant public viewing will be an unveiling of the exhibition in 2007 at the United Nations Headquarters in New York City.

Global exhibitions, such as the Nobel Peace Prize winners, offer the University Libraries the opportunity to enrich the educational experience of students by exposing them to material outside the classroom that enhances their education and complements their studies, regardless of specialization. The exhibits also represent the new technologies and techniques that libraries are using to promote and interpret their collections across disciplines and institutions. The creation of websites that digitize the holdings of international organizations makes unique materials accessible to researchers and students from around the world. Such projects also promote the development of new institutional links between universities and international agencies in innovative ways. During their visit to open the exhibition, Goehlert, Steuer, and Liu met with WMU’s own Digitization Center.
Celebrating Handmade Books, Paper, and Printing: An Exhibition

January 22 — March 16, 2007
Waldo Library
Atrium Entrance and Third Floor

Papers to be presented in conjunction with the exhibition are "Papermaking: Ancient Craft: New Art" by Eve Reid and "How I Made a Medieval Manuscript" by Pamela Rups.

For further information about times and places, call (269) 387-5221.

Gatherings
No. 39, Fall/Spring 2006-07

Gatherings is published biannually by the Friends of the University Libraries, Western Michigan University, Kalamazoo, MI, 49008-5353. Contributors to this issue include: Sharon Carlson, Director, University Archives and Regional History Collections; Bettina S. Meyer, Assistant Dean for Resources; and Susan M.B. Steuer, Head, Special Collections.

staff. They discussed the development and funding of digital projects and best practices in working with research and teaching faculty to develop strong projects. In collaboration with scholars at Western Michigan University, the faculty and staff of the Libraries hope to create new educational and research tools from our own collections to increase awareness and access to the unique items held here, explain their significance, and provide information and inspiration to the public as well as students and academic researchers.

[Special thanks to Robert Goehlert and Kenneth Steuer for additional material.]

[Susan M.B. Steuer began her service as head of the Special Collections unit in the University Libraries in August, 2006. She holds a B.A., from the University of Missouri-Columbia, a M.L.S. from Indiana University, and a Ph.D. from the University of Minnesota-Twin Cities. Sue brings to her faculty position significant experience and research in medieval studies, history, English, and journalism. She can be found in the Rare Book Room area on the third floor of Waldo Library, 387-5221.]
