Dobney named to provost position

The University has concluded its search for a new provost and vice president for academic affairs with the selection of Frederick J. Dobney, currently executive vice president and provost at Michigan Technological University.

Dobney’s appointment, which is subject to approval by the Board of Trustees at its April meeting, will become effective July 1, 2000.

"Dr. Dobney brings with him a wealth of experience, having served as provost and chief operating officer at Michigan Tech, said President Elson S. Floyd of the appointment. "We will put his talents and experience to good use as we enter a very exciting new phase of our University’s history.”

Dobney has served in his current position at MTU since 1993. From 1987 to 1993, he was vice provost for extended university services at Washington State University.

Dobney also served at Loyola University from 1981 to 1986 as dean of the City College, dean of continuing education and director of special programs. He began his career at Saint Louis University, where he held a variety of faculty and administrative posts.

"I am delighted to be joining President Floyd’s team,” said Dobney. “The University is poised to do great things and I am anxious to contribute to its continued success.”

Outgoing Provost Timothy Light, who was appointed in 1996, will return to the faculty at the end of the current academic year.

"I cannot adequately express my appreciation to Tim Light for all that he has done for this University,” said Floyd.

Dobney, a Texas native, earned a bachelor’s degree in history from Baylor University and a law degree, also in history, from Rice University. His areas of expertise are recent American history and American legal history.

Dobney currently serves as a member of the National Association of State Universities and Land-Grant Colleges, its Board of Directors and Telecommunications Advisory Committee for the state of Washington.

He is chairperson of the State Academic Officers Committee on the Michigan Automotive Institute. In addition, he is on the board of directors of North Coast BIDCO, an economic development initiative in Michigan’s Upper Peninsula, and a member of the board of directors for the Upper Peninsula Workforce Development Consortium.

WMU joins ranks of Internet2 universities focused on developing next generation of Internet technology

The University has moved onto the express lane of the information superhighway, with a group of the nation’s leading research universities that is focused on developing the next generation of Internet technology.

WMU was accepted last month as part of Internet2, a partnership involving research universities, industry and government that has been formed to develop the next generation of Internet technology and create a cutting-edge network for the national research community. The work will enable such applications as telemedicine, virtual libraries, interactive video, virtual laboratories that are not possible with the technology underlying today’s Internet.

Run in 1996 by 34 U.S. research universities, Internet2’s members now include 170 universities. It is not a separate physical network, but a consortium that brings institutions and resources together to develop advanced Internet applications that eventually will be deployed globally on the Internet and used for both academic and commercial purposes. Membership will allow extensive collaboration between WMU researchers and those at other member universities.

"If our intent is to be a premier student-centered research institution, it makes perfect sense to become part of this prestigious group,” says Viji Murali, WMU’s new vice president for information technology and chief information officer. "The major benefit to membership in Internet2 is that it opens up a tremendous number of research funding opportunities for our faculty.”

Murali, who spearheaded the drive for WMU’s acceptance into Internet2, says there are a host of less tangible, but very real benefits associated with membership. They include the enhancement of the University’s reputation and position in the national research community and the resulting ability to attract strong research faculty members.

"There also will be, Murali notes, "additional benefits that we don’t yet know about. There may be some wonderful new technologies that we can’t even imagine yet, but we’ll be part of that work and among the first to have access to it.”

As part of its membership application, the University had to outline its current research capabilities as well as the types of research it could undertake with Internet2 research capabilities. Among the goals of the projects outlined were:

• enhanced digital imaging of Anglo-Saxon texts by scholars of the Middle Ages;
• application of new Internet tools to real-time weather data in secondary education science and geography classes;
• completion of photoinization measurements for atomic research being done at the Advanced Light Source at the University of California at Berkeley; and
• downloading of data for study from the Hubble Space Telescope Archive.

"These projects could not be done using conventional Internet technologies..." (Continued on page four)

Mentor Spitsbergen puts high school students on road to research

Having John M. Spitsbergen, biological sciences, as a mentor has paid off for two Battle Creek high school students who earned national honors and $30,000 as a result of research they did with him.

Melinda Sloma and Seetharaman Chadalavada, students at the Battle Creek Area Mathematics and Science Center, took first place at the regional Siemens Westinghouse Science Research Competition, earning the pair a $30,000 scholarship prize and the chance to compete at the national contest.

"These kids do a heck of a job,” he says. "They do literature searches, experiments in the lab, plan experiments and give presentations. I am amazed by their commitment. They’ve been here longer than most university students I have in the lab.”

Their work resulted in the presentation, “Can the Production of Neurotrophic Factor (GDNF) Be Altered to Control Neurodegenerative Disorders?” which they gave at the Siemens Westinghouse competition.

The pair claimed the regional title at Notre Dame and later competed in the national contest in December in Washington, D.C. While Sloma and Chadalavada didn’t claim the top prize in the national contest, they were selected to be featured in national publicity efforts to encourage team research.

"The judges felt that they best exemplified what it means to do team research,” says Connie Duncan, director of the Battle Creek Area Mathematics and Science Center.

"They were commended for how they worked together as a team and how they acted as a team.”

Spitsbergen welcomed the opportunity to work with the high school students to try to interest them in scientific research.

"It is important to involve kids, especially in research. Any chance I get to take up research with students, I will,” he says. "Most students in the sciences want to go on to medical schools and don’t consider a
Teleconference to determine agenda

WMU faculty, staff and students are invited to participate in the Teleconference on Monday, March 27, and Wednesday, March 29, that will identify and prioritize the need for campus improvements in support of campus development and determine a national agenda for 21st Century. The Teleconference, “Women’s Lives, Women’s Voices, Women’s Solutions: Shaping a National Agenda for Higher Education,” is part of a national conference that will take place simultaneously at the University of Michigan and will be connected via a real-time satellite teleconference to provide a forum for women and men in higher education across the country to:

- explore ways to access women’s talents by building on the strengths of their diversity and creating a learning environment that respects and builds on the experiences that women will bring to the campus communities.
- develop new ways of working together in a multicultural world;
- share best practices and form collaborations and supportive networks;
- discuss how universities can better support women as teachers, workers, earners and creators of knowledge; and
- create a national agenda for women in higher education.

The Teleconference will include three sessions over two days. All sessions will take place in 208 Bernhard Center and are free and open to all members of the WMU campus community. Individuals may choose to participate in any or all sessions.

The first session will be broadcast from 1 to 3 p.m. Monday, March 27. It will be followed by a panel discussion that will discuss and develop recommendations and strategies for improving campus climates for all women in higher education.

Feedback from the campus groups will form the foundation for an agenda that will be presented and discussed by a second panel of eight women leaders in higher education the second teleconference, beginning at 11 a.m. to 1 p.m. Wednesday, March 29.

WMU’s participation in the teleconference will be led by Linda Lumley, Student Activities and Leadership Programs, and Gwen Raaberg, Center for Diversity and Inclusion.

Powell twice honored by professional groups

Theresa Powell, vice president for student affairs, has been selected by the faculty of the Higher Education Program at Ohio State University to receive the 2000 Maude Stewart Award.

The award "acknowledges and honors individuals whose significant contributions to the field of higher education and student affairs." Powell will receive the award at the 2000 Western Michigan University Alumni Association Postcard Breakfast.

Final AGAGE talk March 21

The last in a series of workshops sponsored by AGAGE will be held Tuesday, March 21.

Pharmacology and Global Change Seminar Series: "Pharmacology and Global Change" will be held at 10 a.m. in 1210 Schneider Hall. Arthur Crocier of Wolverine World Wide Inc. will present his talk "Wolverine World Wide Inc.: A Global Company," at 4 p.m. in the Media Room. The seminar will conclude in the University Health Science Building.

Global business is topic

The president of global sourcing for the Grand Rapids-based company that produces the children’s Foot Flame footwear will visit the campus Wednesday, March 22, to discuss doing business in the global marketplace.

Arthur Crocier of Wolverine World Wide Inc. will present his talk "Wolverine World Wide Inc.: A Global Company," at 4 p.m. in 1210 Schneider Hall. He will discuss Wolverine’s worldwide operations, focusing on footwear production in the Asia-Pacific region. The free public address is part of the College of Business Lecture Series sponsored by the Haworth College of Business’ Asia/Pacific Education Program.

Panel to explore ethical issues in criminal justice

The ethical questions facing the criminal justice system as it moves into the next century will be the topic of discussions Thursday, March 16, by a panel that includes a judge, a prosecutor and a police inspector.

The panel will discuss "Ethics in Criminal Justice: Looking Ahead" at 7 p.m. in 210 Bernhard Center. Sponsored by the Center for the Study of Ethics in Society, the discussion is free and open to the public.

In particular, the panel discussion will be led by Vincent C. Westra, chief district judge of the 6th Circuit Court of Kalamazoo County District Court; Karen Hayter, Kalamazoo County assistant prosecutor; Dale DeLena, inspector and director of professional standards for the Kalamazoo Department of Public Safety; and Dick Goldberg, West Michigan Professor of Journalism.

Goldberg will read at 8:30 p.m. in "Luxury and the Politics of Place in an Urban Community," he will talk at a book at a colloquium at 12:30 to 2:30 p.m. Tuesday, March 14, in 116 Moore Hall.

Business logistics specialist Patricia J. Daughtery, the Siegfried Professor of Marketing and interim chair of the marketing program at the University of Oklahoma, will present a public lecture on "Global and U.S. Technology Linkages Between Business and Academe." He will talk on "Tourism, Trade and Globalization" at 4:45 p.m. Monday, March 13, in 5002 Knauss Hall. A special student and class, he is the author of "Black Corona: Race and Ethnicity in American Political Activism Steven Gre- gory, associate professor of anthropology at the New York University, will speak on "Tourism, Trade and Globalization" at 4:45 p.m. Monday, March 13, in 5002 Knauss Hall. A special in student and class, he is the author of "Black Corona: Race and Ethnicity in American Political Activism Steven Gre- gory, associate professor of anthropology at the New York University, will speak on "Tourism, Trade and Globalization" at 4:45 p.m. Monday, March 13, in 5002 Knauss Hall. Twelve staff members honored for excellence

Twelve outstanding campus employees have been selected to receive semiannual Service Excellence Awards. Each winner will receive a $100 prize and a commemorative certificate.

Two award recipients are from the American Federation of State, County and Municipal Employees Group. They are Debra White, Haworth College of Business administrative assistant, and Betty Veer, Valley III dining service.

The following list of vacancies is currently posted through the Job Opportunity Program by employment services in the Department of Human Resources. Interested, eligible employees should submit a job application and resume to the appropriate dean or chairperson.

Disease management pilot program will focus on asthma

Disease management pilot program will focus on asthma in University community

Do you, your spouse, daughter or son suffer from asthma?

The University Health Management Group is looking to recruit asthmatics or parents of asthmatics to participate in a focused research program regarding asthma disease management pilot program. Lovelace Health Innovations Inc. of Albuquerque, N.M., a nationally recognized disease management company, will coordinate the focus group meetings.

The asthma focus group session will involve discussion, group activity and dinner with provided information. The meeting date is tentatively scheduled for mid-to-late March. If you are interested in participating or need further information, please contact Linda Spiker, Sindseude Health Center, 7-3782.

The asthma disease management program is a top priority for the University Health Management Group during 2000. Disease management is a coordinated effort to provide health care, support and education to individuals with a specific medical disease or condition. Disease management programs involve the patient’s family, the primary care physician, medical disease specialists and many other health care providers. The main objectives of disease management programs are to provide individuals and their families with informed and educated about their disease and to prevent the disease from decreasing their quality of life.

Spring food drive set

Start planning now to contribute this spring to the Loaves & Fishes Food Drive.

More information about the March 27-April 7 drive will appear in the next issue of Western News. The drive is sponsored by four campus employee groups.

Jobs

The following list of vacancies is currently being posted through the Job Opportunity Program by employment services in the Department of Human Resources. Interested, eligible employees should submit a job application and resume to the appropriate dean or chairperson.

Exchange

For sale—1994 Chrysler LeBaron convertible. Good condition. $7,000. Call Diana, 7-4935.

ART OF MARKETING "Price" video available

Thank you to the many managers and supervisors who attended the program "Perri"’s Art of Marketing" presentation on Feb. 22. The presenter, Jan Olso, did a great job of helping us understand marketing principles and its role in developing our own compensation system.

If you missed the presentation, you can also order a copy of the video on ucdocs.com under "Comp 2000." The "Art of Marketing" video is about 60 minutes long and is geared toward managers and supervisors. We encourage departmental groups to order—will even provide a copy to each team member to facilitate discussions and conduct a question and answer session.

For more information about Comp 2000, visit the Web site at www.wmich.edu/hr/comp2000.htm.

On campus

Covering all the angles—Juleen Eichinger can say she knows WMU from every possible angle as a student, faculty member, and staff member. Now that she is an executive assistant of communications for the Office of the Vice President for Research and the Graduate College, the Detroit native came here to study teaching the field of home economics in 1969, and by her own admission, couldn’t stay away. She left briefly to teach, then returned in 1979 to get a master’s degree. She has the dubious distinction of being the first, last and only person ever to receive a master’s degree in the academic teaching of religion from the University, as that program was discontinued shortly after she graduated. She continued on at WMU, teaching religion courses, working as a secretary in the former Home Economics Department and eventually found herself producing books and journals for the Medieval Institute. But academe continued its magnetic allure and she pursued a second master’s degree and a doctoral degree in history, which she received last April. Now, more than three decades, four degrees and several different roles later, she has found a new place at the University in research and graduate education. Her current responsibilities encompass communications and publication activities for those units, including editing and coordinating publication of the Research Magazine, overseeing design and content of Web pages, and preparing recruitment materials for the Graduate College. She does not provide health care, support and education to individuals with a specific medical disease or condition. Disease management programs involve the patient’s family, the primary care physician, medical disease specialists and many other health care providers. The main objectives of disease management programs are to provide individuals and their families with informed and educated about their disease and to prevent the disease from decreasing their quality of life.

IT strategic planning team seeking input

How would the University implement a laptop-computer requirement for students? How is critical the need for increased numbers of modern dial-up dial-out access to University network? How would we use campus-wide data warehouse to centralize institutional information fit into the current computing structure? Can information technology enhance student recruitment?

These are just a few of the topics that could be addressed in a strategic plan to guide the future use of information technology at WMU. Such a plan is now under development, and feedback on the plan draft is needed from members of the University community.

Faculty, staff, students and other members of the extended University community will have an opportunity to provide feedback by reviewing the text online and responding to a survey that will be on the University home page. The plan draft and survey can be found at www.wmich.edu/oi-strategic-planning.

This link to the site also appears on the WMU home page.

Zest for life

The Zest for Life program offers free fitness testing to benefits-eligible employes and their spouses.

Prior to testing, all participants must have their health screening forms complete and up-to-date. The one-hour tests are administered in a private testing room located in the Student Recreation Center.

The fitness test assesses cardiovascular endurance, body composition and muscular strength and endurance. Following the test, a consultation will be scheduled to process your results while considering your specific fitness goals. A link to the test also appears on your personal fitness level, contact Tammy Curtis at 7-3543.

Human resources

Clinical Dietitian at Lunch & Learn

Nutrition and diet...did you know you have a great resource for help and information?

Gretchen Kuenzi, a clinical dietitian at Sindseude Health Center, works in the area of health and wellness counseling, and she specializes in wellness, cardiovascular nutrition, weight management, diabetes and eating disorders counseling.

Join Gretchen in a Lunch & Learn discussion about overall health, fitness and how you can help yourself. The session is set for noon to 1 p.m., Wednesday, March 15, in 157 Bernhard Center. Contact the Em-
