The issue of course textbooks continues to be a challenge in higher education. For students the primary concern is the skyrocketing costs: spending several hundred dollars for required textbooks per semester at a time when tuition and fees continue to rise. Consequently, students are borrowing, renting or simply forgoing purchasing textbooks to alleviate some of the financial burden. For those students who are unable to purchase textbooks, are they still receiving the same high quality education? Although faculty members empathize with students’ frustrations concerning textbook prices, they may not be aware of the alternative resources and services offered by the library that can assist them in meeting the same learning objectives as publisher textbooks.

The University Libraries at Western Michigan University (WMU) launched two Library initiatives in the Fall of 2013. First, the Libraries formed a Textbook Pilot Project Task Force that recommended purchasing textbooks for targeted high enrollment courses at the 1000 and 2000 undergraduate level and place them on library course reserves for students. Usage data and faculty responses up to this point indicate this project has been successful and continues for the Spring 2014 semester. Secondly, it became apparent that the Libraries must go beyond purchasing textbooks and begin initiating an awareness campaign to educate the faculty about alternatives to textbooks.

The Open Educational Resources (OER) movement has arisen as a way to provide high quality resources for low or no cost. Open textbooks are distributed, normally for free, under an open license. These are electronic publications that may be authored by an individual, or a group of individuals working collaboratively. Typically these works are issued under a Creative Commons License which allows the authors to hold the copyright while still making it possible for others to use their works. WMU Libraries has developed a guide to provide links to many of these collections of electronic textbooks and resources as well as assistance with selecting and using them.

In March 2014, a short survey was sent to the faculty whose classes were targeted for the textbook pilot project.

Survey says...

In March 2014, a short survey was sent to the faculty whose classes were targeted for the textbook pilot project.

Comments from faculty:

"The students appreciate this resource. Many students have difficulty buying expensive textbooks, so a free resource is very useful."

Library Course Reserves Pilot Project

- In Summer 2013, the WMU Libraries convened a task force to address the concerns and frustrations of students, faculty and library staff regarding textbooks.
- Despite textbooks being excluded from collection development policies at WMU, the task force recommended purchasing textbooks; targeting courses that would impact the most students.
- A budget of $10,000 was allocated from Library Administration for the 2013-2014 academic year.
- Guidelines for purchasing textbooks included undergraduate courses at the 1000 and 2000 level with high enrollments (minimum of 100 students).
- Multi-user e-books were the recommended format; however for this pilot project only physical copies were acquired.
- When the textbooks arrived, faculty members were notified via email with call number and location information and they were asked to notify their students.
- Books were placed on 2 hour course reserve at their respective circulation desk for the entire academic year.
- Any textbooks that the University Libraries owned were pulled from the stacks and placed on course reserve as well.
- For Fall 2013 semester 30 textbooks were purchased, with the average cost of $131.50 per book.
- A total of 32 textbooks were placed on reserve for Fall semester circulating 561 times; the average circulation being 17.53 times per book.
- During Spring 2014, the taskforce purchased 26 textbooks, with the average cost of $118.88 per book.
- A total of 52 books (32 books from Fall 2013 remained on reserve whether they were being used for a class or not) were on reserve for the Spring 2014 semester circulating 495 times; the average circulation being 9.52 times per book.
- Based on the circulation data and survey feedback, the task force has deemed the project to be a success and will continue indefinitely.

Alternative Approaches

The Open Educational Resources (OER) movement has arisen as a way to provide high quality resources for low or no cost. Open textbooks are distributed, normally for free, under an open license. These are electronic publications that may be authored by an individual, or a group of individuals working collaboratively. Typically these works are issued under a Creative Commons License which allows the authors to hold the copyright while still making it possible for others to use their works. WMU Libraries has developed a guide to provide links to many of these collections of electronic textbooks and resources as well as assistance with selecting and using them.
